

HOW SALT[®] WORKS

Salt is a learning content management system that can be used to develop and deliver e-learning with sleek, modern designs.

It connects easily to any SCORM1.2 compliant learning management systems (LMS), including Saba, CornerStone, SumTotal, Net Dimensions, Litmos, Docebo and Successfactors.

Version control is automatic, so you never have to worry about losing published content.

The analytics tool keeps your data private and anonymous to everyone except your chosen administrators. It relies on de-identified course activity data only (eg LMS:1234), without storing or collecting identifiable user information on the system. Progress, scores and completion data are sent back to the LMS.

WE CAN HELP

GRC Solutions' team develops off-the-shelf courses. We can also work with you to develop custom courses to suit your organisation.

We handle legislative updates and refresh content regularly. The publishing is seamless.
